Our Leadership

David Luo

Co-founder and CEO

With a flair for mathematics and more than 15 years of experience in global derivatives trading, David Luo spent his professional journey at the forefront of major financial institutions. Luo holds an MSc in Financial Mathematics from New York University and a BSc in Mathematics from Tsinghua University, serving as the springboard for his illustrious career.

In 2008, Luo began his journey at Credit Suisse as a derivatives trader across multiple asset classes, building his team from the ground up and achieving the highest revenue among all CS APAC derivatives desks in 2015. Following that, Luo served as the Head of Equity Derivatives at China International Capital Corp (CICC), a prestigious investment bank in the Greater China region. During this time, he expanded his portfolio by leading a wide range of business units, including derivatives trading, market making, quantitative trading, product structuring, and quantitative modelling. Guided by his strategic vision, CICC received the esteemed accolade of China House of the Year at the Asia Risk Awards 2022 — a testament to David's exceptional leadership and contributions to the Asian derivatives industry.

Recognising the vast potential of the cryptocurrency landscape, Luo embarked on an entrepreneurial path by co-founding Darwinbit in 2022. As a veteran in the field, Luo possesses immense knowledge and a proven track record of management skills. He works relentlessly to make significant contributions to the world of finance, driving innovation and growth in the crypto options and structured products market.
